PORT CORPUS CHRISTI PRESENT AT AWEA 2010

“Visit America’s Wind Power Port at Booth 9640”

Corpus Christi, TX – Port Corpus Christi showcases capabilities to handle wind power energy components at the 2010 American Wind Energy Association (AWEA) Conference in Dallas, Texas, May 23-26, 2010. With more than 23,000 industry leaders, AWEA is the largest conference in attendance of wind energy professionals from around the world. Port Corpus Christi Business Development team will be showcasing the Port’s outstanding facilities and superior shipping logistics at **BOOTH 9640**. Port Corpus Christi, a leader in handling wind energy components through the Gulf of Mexico, has been improving its staging areas to accommodate the growth of wind energy components.

Port Corpus Christi is strategically located in the Gulf of Mexico with direct access to major interstate highways, multiple uncongested routes, minimal escort requirements, short channel transit, dock rail service, a dedicated port-owned railroad and embedded rail service. With the movement of wind components by KCS earlier this month, Port Corpus Christi can now offer direct Class-1 rail service from BNSF, Up & KCS. The Port’s outstanding facilities offer paved open-storage yards as a flexible solution when ship schedules and project construction timelines do not match up. Port Corpus Christi offers multiple docks and berths upon arrival, 500+ acres for development, 100+ hard surface acres and growing, a Foreign Trade Zone throughout the Port, large manufacturing sites available and is off-shore project ready. It is adjacent to 45’ deepwater channel and has Intracoastal Waterway connection.
